SUMMARY

Full-stack engineer with hands-on experience building production-grade systems across frontend, backend, and DevOps. Proficient in Next.js, Go, TypeScript, and cloud-native infrastructure. Passionate about solving real-world problems through scalable, AI-integrated applications. Proven track record in hackathon wins and shipping impactful products end-to-end.

EDUCATION

C. V. Raman Global University

Bachelor of Technology in Computer Science and Engineering

- CGPA: 8.26 / 10.00

Bhubaneswar, Odisha

2023 – 2027

TECHNICAL SKILLS

Languages: Go, Java, JavaScript, TypeScript

Frontend: HTML5, CSS3, React, Next.js, React Native, Tailwind CSS

Backend: Node.js, Express.js, Bun, Go

Databases: PostgreSQL, MongoDB, MySQL, Redis, Prisma ORM

Cloud & DevOps: Docker, Kubernetes, AWS, Terraform, Argo CD, Jenkins, Linux

Tools & Testing: Git, Turborepo, Grafana, Agile, Scrum

EXPERIENCE

Software Engineer Intern

Zomind.ai

April 2026 – June 2026

Remote

- Contributed to core product development with a focus on frontend engineering using Next.js and TypeScript, building responsive, accessible UI components and optimizing rendering performance across the platform
- Designed and implemented CI/CD automation pipelines using Jenkins, reducing deployment cycle time and enabling consistent, repeatable releases across staging and production environments
- Built a real-time sales dashboard integrating internal business metrics, enabling live visibility into key performance indicators for the sales and engineering teams

SELECTED PROJECTS

Q-Flow (QueueLess) | Next.js, Go, PostgreSQL, Redis, RabbitMQ, Docker

GitHub

- Built a production-grade multi-tenant queue platform for clinics and hospitals, with real-time WebSocket fan-out and an AI-powered recommendation engine predicting optimal visit times based on user history
- Engineered backend geofencing (Haversine, 0.5 km) with IndexedDB offline caching and AI-driven slot re-balancing nudging at 10 min late, auto-cancelling at 30 min to achieve zero idle time
- Achieved 35% no-show reduction and 20% throughput increase via 7-stage async RabbitMQ reminders, with JWT RBAC and enterprise compliance through Trivy and SonarCloud scanning

Limitier.io (API Rate Limiting Platform) | Go, Gin, PostgreSQL, Redis, Kafka, Docker, Kubernetes

GitHub

- Architected a production-grade distributed API rate limiting platform in Go, enforcing sub-millisecond throttling decisions via Redis-cached auth state and atomic Lua scripts, bypassing PostgreSQL on the hot path
- Implemented a pluggable rate limiting engine supporting Token Bucket, Fixed Window, Sliding Window (Counter/Log), and Leaky Bucket algorithms with tiered availability across Free, Pro, and Enterprise plans
- Designed a non-blocking Kafka event pipeline for asynchronous analytics logging, and deployed the full stack via Docker, Kubernetes (HPA, Ingress), and Prometheus-based observability

ACHIEVEMENTS

Google Solution Challenge – Top 100 Worldwide: Selected among the top 6,700 teams globally from 100+ countries, recognized for impactful technology addressing real-world UN Sustainable Development Goals

Code Relay 4.0 Winner – IIT Bhubaneswar: Secured 1st place in the inter-college coding relay, demonstrating advanced problem-solving and algorithmic proficiency under time-constrained conditions

HackTheStack Winner: Won the national-level hackathon by engineering a full-stack solution under 24 hours, recognized for technical depth, scalability, and product design

Smart India Hackathon 2025 Finalist: Selected among top 1,500 teams from 75,000+ participating teams nationwide for innovative technology solutions

Cardano Hackathon 2025 Finalist: Recognized for blockchain innovation in decentralized application development at India Blockchain Week Asia Edition
